

George Anagnostou

Software Builder with Financial Expertise

San Francisco, CA | anagnostougeorgejohn@gmail.com | georgeanagnostou.com | GitHub | LinkedIn

Wealth management professional and software builder with 4+ years at J.P. Morgan. Build and maintain internal tools, teach colleagues, and lead software projects from problem definition through launch.

Experience

J.P. Morgan, San Francisco, CA

2022 - Present

Senior Client Associate - AC Group

- Coordinate trading, onboarding, and stock distributions for venture capital and private wealth clients, working across brokerage, banking, venture services, and operations.

DIK - Distribution Workflow CRM

2025 - Present

Python, Flask, SQLite, JavaScript, Jinja

- Built a CRM used by a three-person team to manage venture capital stock distributions, centralizing transaction history, document generation, and reporting.
- Automated and replaced spreadsheet merging, cutting hours of work to minutes; added validation, previews, and structured outputs for use in internal tools.

Prefill - PDF Document Preparation

2025 - Present

TypeScript, pdf-lib, HTML, CSS

- Built a browser tool that fills shared fields across PDFs from one set of inputs, preserving editable output and flagging ambiguous matches for review.
- Met deployment constraints with a single HTML file that runs offline without a server or database; available internally to approximately 600 client-facing employees.

Leadership & Communication

Client Associate Advisory Council, J.P. Morgan

2023 - Present

Forms Subcommittee Co-Chair since 2025; selected member of a 40-person council

- Won management support for Prefill to address a longstanding document preparation need; led risk and deployment discussions through internal publication.
- Lead forms reviews with operations and technology partners; host regional roundtables for a community of 50+ associates, and bring AI workflow feedback to management.
- Earned senior leadership recognition and access to product and engineering beta programs; started a Python and AI training series for colleagues.

Independent Project

GPTEes.io - AI-Powered Clothing

2026 - Present

TypeScript, React, Next.js, OpenAI, Stripe, Printful, Vercel

- Independently designed and launched an AI clothing MVP, connecting OpenAI image generation, Stripe payments, and Printful printing and shipping in an automated order workflow.
